

WEBSITES FOR GP PRACTICES

A practice website that works as hard as your *reception team*.

Patients arrive stressed, in a hurry and often on an old phone. Your website should get them to the right service in seconds, and quietly take routine requests off the phones.

Willowbrook Surgery is a fictional practice built and hosted by Flutterly so you can judge the standard for yourself. Click around it on any device, exactly as your patients would.

01

Signposting that comes first

Appointments, prescriptions, online consultations and the NHS App front and centre, so common journeys take one tap, not a hunt through menus.

02

Accessible to every patient

WCAG 2.2 AA designed in from the first wireframe, tested with real assistive technology, and shipped with a published accessibility statement.

03

Self-serve that cuts calls

Registration, fit notes, test results and travel advice become guided answers online, so reception repeats them less often on the phone.

● WCAG 2.2 AA on every build

● Custom code, never a template

● UK hosted, daily backups

● One accountable person

FREE WEBSITE AUDIT

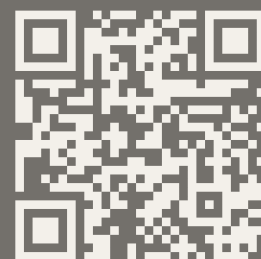

Start with a written review of your *current* site.

A plain-English audit against NHS accessibility and content standards: prioritised fixes you can hand to any developer, and “keep what you have” when that is the honest answer. Free, with no follow-up pressure.
